

2023 Updated Overnight Restricted Drug Workflow

Background: Between 5pm and 7am, providers can place an order for the listed* drugs WITHOUT prior approval from the infectious disease service. The restriction process during the hours of 7am – 5pm remains the same with required telephone or ID consult if the patient does not meet a per protocol exception.

Overnight Restricted Drug Responsibility (5pm – 7am)

Prescriber:

- **Telephone Approval** drugs should have either an accompanying 'Request for Overnight Antimicrobial' order or an ID consult order if full consult is needed.
- **ID Consult Approval** drugs should have an accompanying ID consult ordered simultaneously.

Pharmacist:

- Verify restricted orders as usual with ID provider name, 'after hours (5-7p), approval required next day', or 'per protocol' as clinically appropriate.
 - During daytime hours (7a-5p), the 'after hours (5p-7a), approval required next day' should not be verified. Prescriber must place ID consult or receive telephone approval as required per medication.

ID fellow assigned the GERM pager:

- Review the 'ID – Overnight Restricted Drugs' list, discuss case with primary team, and leave telephone note to signify approval, if appropriate, for telephone approval medication. If not appropriate, ID fellow will work with team to determine an alternative agent.
- ID consults for medications requiring that method of approval will be staffed as usual.

Drugs Included in Overnight Restricted Workflow

Telephone Approval*:

Ertapenem
Fosfomycin
Meropenem
Ganciclovir
Valganciclovir
Ceftazidime

ID Consult Approval*:

HIV meds
HCV meds
